Section 1: Introduction & Getting Started

This guide explains the core DentaTrak workflow and the most common tasks performed by dental practices and labs. It is designed as a practical reference for creating, tracking, updating, and reviewing dental cases.

1.1 What is DentaTrak?

DentaTrak is a dental case workflow platform that gives practices a centralized view of cases as they move from creation through delivery. The case board helps teams see what is in progress, what is due soon, what is late, which cases may be at risk because of an upcoming patient appointment, and who is responsible for each case.

Common tasks include:

- Create and update dental cases.
- Assign cases to team members, labs, or assignment labels.
- Upload case files and completed designs.
- Monitor due dates and patient appointment dates to quickly identify cases that need attention.
- Track shipping information when a physical case is sent.
- Review practice and lab performance insights.

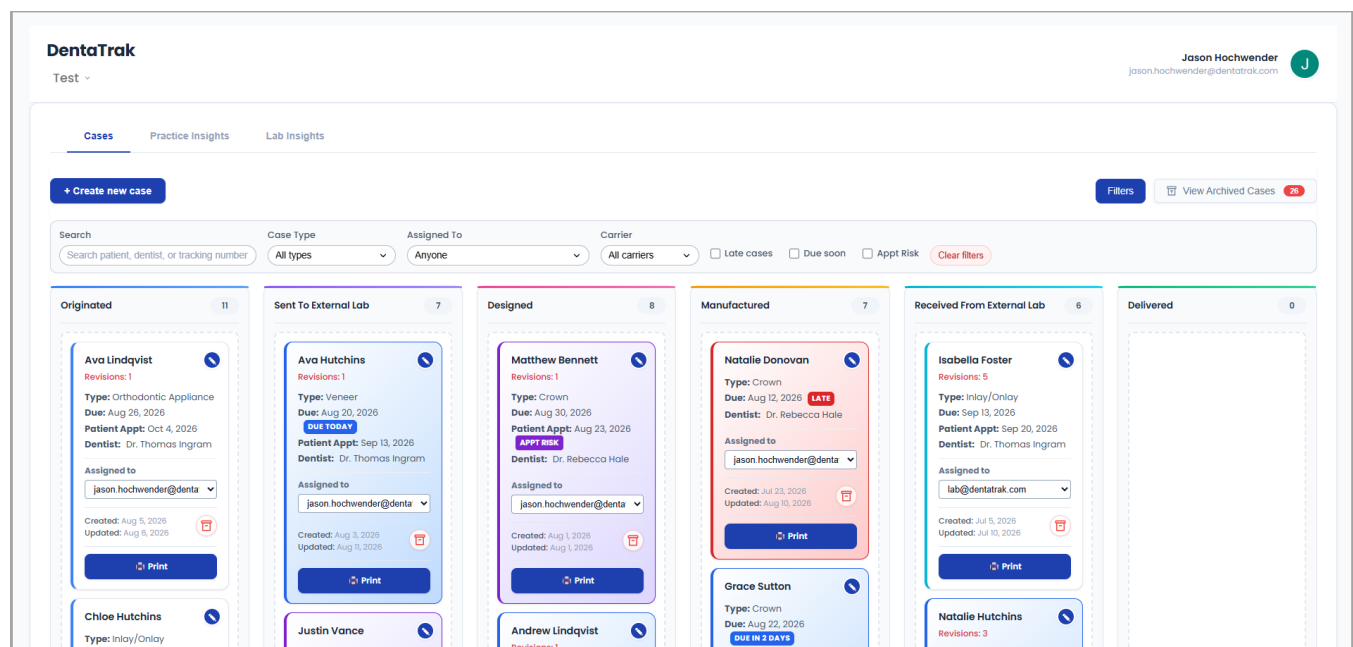

Figure 1: DentaTrak main case board

1.2 Understanding the Case Board

The **Cases** tab is the primary workspace in DentaTrak. Cases are organized into workflow columns so the current state of each case can be understood at a glance.

- Originated
- Sent To External Lab
- Designed
- Manufactured
- Received From External Lab
- Delivered

Note. Cases can be moved through the workflow as work progresses. Visual highlighting helps time-sensitive cases stand out while scanning the board:

- **Due Soon** cases are highlighted in blue.
- **Appointment Risk** cases are highlighted in purple when a patient appointment is approaching and the case is not yet complete.
- **Late** cases are highlighted in red.

Section 2: Creating & Managing Cases

2.1 Creating a Case

Select **+ Create new case** from the **Cases** tab. Complete the information needed for the case. Required fields are marked with an asterisk (*).

1. **Patient & Dentist Information**

Enter the patient's first and last name, date of birth, gender, and dentist name.

2. **Case Details**

Select the case type, enter the tooth shade if applicable, choose the **due date**, and select the starting **status**.

You can also enter an optional **Patient Appointment Date**. DentaTrak uses this date to help identify cases that may be at risk as the patient's appointment approaches.

3. **Assignment**

Use **Assigned To** to assign the case to a practice user or assignment label, if applicable.

4. **Notes**

Add any additional case information, instructions, or other notes as needed.

The screenshot shows the 'Create New Case' form with the following fields and options:

- Patient First Name ***: Text input field.
- Patient Last Name ***: Text input field.
- Patient DOB ***: Date picker with format 'mm/dd/yyyy'.
- Gender ***: Dropdown menu with 'Select gender...'.
- Dentist Name ***: Text input field.
- Case Type ***: Dropdown menu with 'Select case type...'.
- Tooth Shade**: Text input field with placeholder 'e.g. A2, B1'.
- Due Date ***: Date picker with format 'mm/dd/yyyy'.
- Patient Appointment Date**: Date picker with format 'mm/dd/yyyy'.
- Status ***: Dropdown menu with 'Originated' selected.
- Assigned To**: Dropdown menu with 'None' selected.
- Notes**: Text area with placeholder 'Optional notes about this case'.

At the bottom, there are two buttons: 'Create Case' (blue) and 'Cancel' (gray).

Figure 2: Create New Case - patient, case, assignment, and scheduling information

5. **Shipping (optional)**

If shipping information is available, select the carrier and enter the tracking number.

6. **Attachments (optional)**

Upload supporting files as needed. DentaTrak supports separate attachment areas for **Photos, Intraoral Scans, Facial Scans, Photogrammetry, and Completed Designs.**

7. **Created By**

DentaTrak automatically records the user who creates the case. No selection is required.

8. **Create Case**

Select **Create Case** to save the case.

Figure 3: Create New Case - shipping, attachments, and case creation

Note. Created By is recorded automatically. Users do not need to select the creator when entering a case.

2.2 Viewing and Updating a Case

Open an existing case to review its information or make changes as the case progresses. The **Edit Case** window displays the information currently saved for the case.

1. **Revision History**

When a case has revisions, the revision indicator appears at the top of the case. Select it to review the case's revision history.

2. **Case Information**

Update patient, dentist, clinical, due date, status, assignment, or other case information as needed.

3. **Shipping**

Add or update the carrier and tracking number when applicable. When tracking information is available, select **Track package** to view the shipment.

4. **Attachments**
Add supporting files as the case progresses, including photos, intraoral scans, facial scans, photogrammetry files, and completed designs. Existing attachments can be **viewed or downloaded** from the case.
5. **Created By**
Created By identifies the user who originally created the case. This value is recorded automatically and cannot be changed.
6. **Update Case**
Select **Update Case** to save your changes. The **Update Case** and **Cancel** buttons remain available at the bottom of the window while scrolling through the case.

2.3 Assigning Cases

Assigned To identifies the practice user or assignment label currently responsible for the case. The assignment can be changed as the case moves through the workflow.

Section 3: Finding & Monitoring Cases

3.1 Search and Filters

Use the filters above the **Cases** board to quickly find specific cases or narrow the cases currently displayed.

1. **Search**
Search for a case by patient name, dentist name, or tracking number.
2. **Case Type**
Display only cases of a selected case type.
3. **Assigned To**
Display cases assigned to a specific practice user or assignment label.
4. **Carrier**
Display cases associated with a selected shipping carrier.
5. **Late cases**
Select **Late cases** to display only cases that are currently considered late.
6. **Due soon**
Select **Due soon** to display only cases approaching their due date.
7. **Appt Risk**
Select **Appt Risk** to display cases whose patient appointment date is approaching and may require attention before the appointment.
8. **Clear filters**
Select **Clear filters** to remove the active filters and return to the full Cases board.

When filters are applied, only matching cases are displayed. The case count at the top of each status column also updates to reflect the cases currently shown.

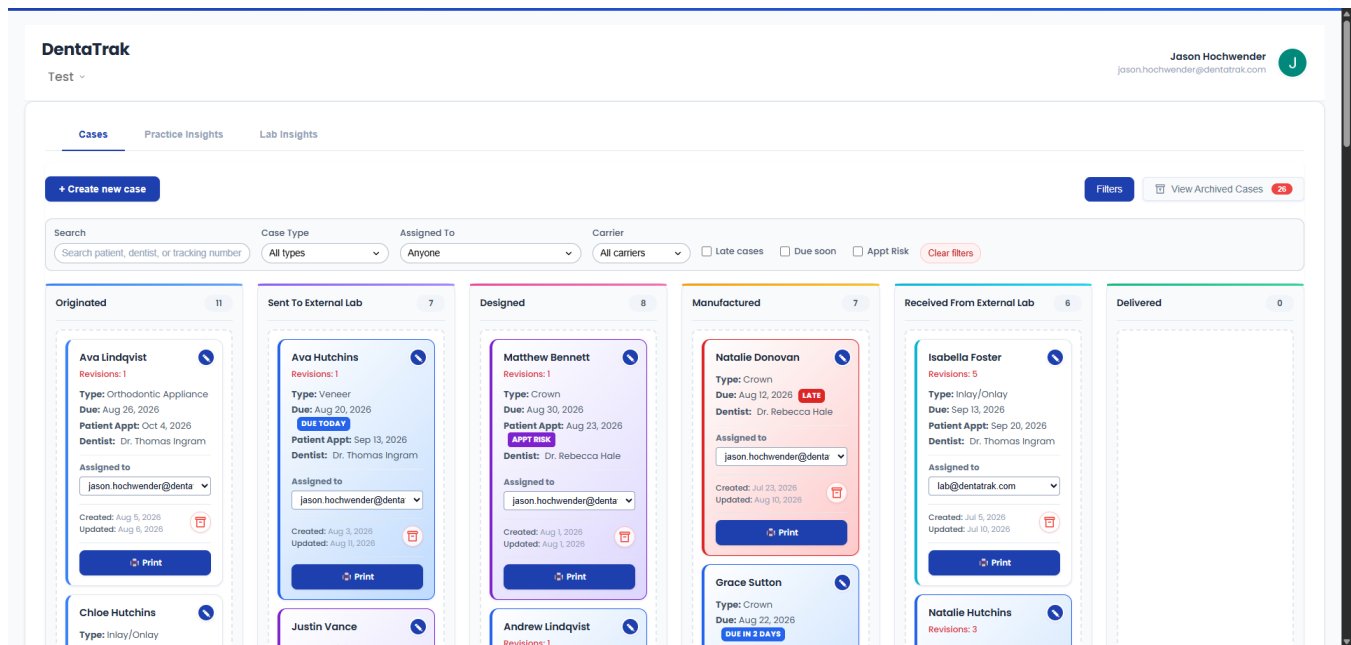

Figure 4: Case board search and filters

3.2 Case Priority Highlights

DentaTrak can visually highlight time-sensitive cases directly on the Cases board. This makes it easier to identify cases requiring attention without opening each case.

- **Late** cases are highlighted in red when they have passed the configured due-date threshold.
- **Appointment Risk** cases are highlighted in purple when the patient's appointment is approaching.
- **Due Soon** cases are highlighted in blue when the case is approaching its due date.

When more than one condition applies to a case, DentaTrak uses the following priority:

Late > Appointment Risk > Due Soon > On Track

For example, a case that is both due soon and approaching its patient appointment displays as **Appointment Risk**. A case that meets the Late criteria displays as **Late** regardless of the other conditions.

Note. Late, Due Soon, and Appointment Risk highlighting are configured in **Settings**. The corresponding filters are available when reviewing cases on the board.

Section 4: Files, Designs & Shipping

4.1 Attachments and Completed Designs

Supporting files can be stored directly with a case so authorized users can access them throughout the case workflow.

DentaTrak provides separate attachment areas for:

- Photos
- Intraoral Scans
- Facial Scans

- Photogrammetry
- Completed Designs

Open the case and use **Select files** in the appropriate attachment area to add files. Attachments remain associated with the case as it moves through the workflow.

Existing attachments can be **viewed or downloaded** from the case when needed.

4.2 Shipping and Tracking

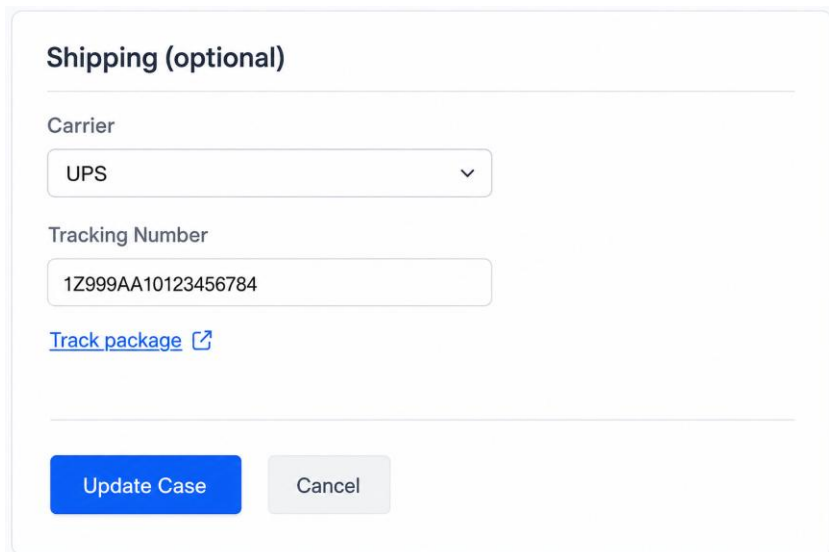

Shipping information can be added to a case when physical items are sent between the practice, lab, or other destination.

To add shipping information:

1. Open the case and select the appropriate **Carrier**.
2. Enter the **Tracking Number** provided by the carrier.
3. Select **Update Case** to save the shipping information.

After a carrier and tracking number have been saved, select **Track package** to view the latest shipment information on the carrier's tracking site.

Shipping information can also be used with the **Carrier** filter on the Cases board to help locate cases associated with a specific carrier.

The screenshot shows a form titled "Shipping (optional)". It contains two main input fields: "Carrier" with a dropdown menu showing "UPS" and a downward arrow, and "Tracking Number" with a text input field containing "1Z999AA10123456784". Below these fields is a blue link labeled "Track package" with an external link icon. At the bottom of the form are two buttons: a blue "Update Case" button and a grey "Cancel" button.

Figure 5: Shipping / carrier and tracking fields

Section 5: Archiving Cases

Archiving removes completed cases from the active Cases board while preserving their case information and history.

- **Archive a case**
Select the archive action on a case card to move the case to **Archived Cases**. Individual case archiving must be enabled for the practice.

- **View archived cases**
Select **View Archived Cases** from the **Cases** tab to review previously archived cases.
- **Restore a case**
Open an archived case and select **Restore** to return it to the active Cases board.
- **View or print an archived case**
Archived cases can also be opened for review or printed directly from the Archived Cases list.
- **Automatic archiving**
Practice administrators can configure DentaTrak to automatically archive delivered cases after a specified number of days.

Archived Cases						
Search by patient name or dentist... All dates ▾ All types ▾						
Showing 25 of 64 archived cases						
PATIENT NAME	DENTIST	CASE TYPE	STATUS	CREATED	ARCHIVED	ACTIONS
Justin Foster	Dr. Rebecca Hale	Bridge	Sent To External Lab	Jul 31, 2026	Aug 16, 2026	View Print Restore
Andrew Doyle	Dr. Thomas Ingram	Inlay/Onlay	Delivered	Jul 17, 2026	Aug 12, 2026	View Print Restore
Kevin Nakamura	Dr. Rebecca Hale	Partial	Delivered	Aug 8, 2026	Aug 12, 2026	View Print Restore
Chloe Nakamura	Dr. Rebecca Hale	Crown	Delivered	Aug 8, 2026	Aug 12, 2026	View Print Restore

Figure 6: Archived Cases showing search, filters, case actions, and Restore

Section 6: Practice Insights

Practice Insights provides an overview of case activity, workload, timing risk, and trends across the practice. Use these insights to understand current case volume, workflow distribution, cases that may require attention, and how cases are being created over time.

6.1 Practice Metrics

The **Practice Insights** tab provides summary metrics and charts based on case activity recorded in DentaTrak.

Summary metrics include:

- **New This Month** - cases created during the current month.
- **Active Cases** - cases currently active in the workflow, excluding delivered and archived cases.
- **Delivered This Month** - cases recorded as delivered during the current month.
- **Archived** - cases currently stored in Archived Cases.

Case Flow Status

Case Flow Status groups active cases according to their current timing priority:

- **On Track** - no immediate timing risk.
- **Due Soon** - approaching the configured case due date.
- **Appointment Risk** - the patient's appointment date is approaching and the case meets the configured Appointment Risk criteria.
- **Late** - past the configured due-date threshold.

Each active case is counted in only one Case Flow Status category. When multiple conditions apply, DentaTrak prioritizes them as:

Late > Appointment Risk > Due Soon > On Track

The Case Flow Status totals therefore reconcile to the number of **Active Cases**.

Case Analysis

Additional charts provide a visual breakdown of cases by factors such as:

- workflow status
- case type

Where a chart provides a scope or period selector, use it to change the data being displayed.

Practice Insights update as cases are created, updated, moved through the workflow, delivered, or archived.

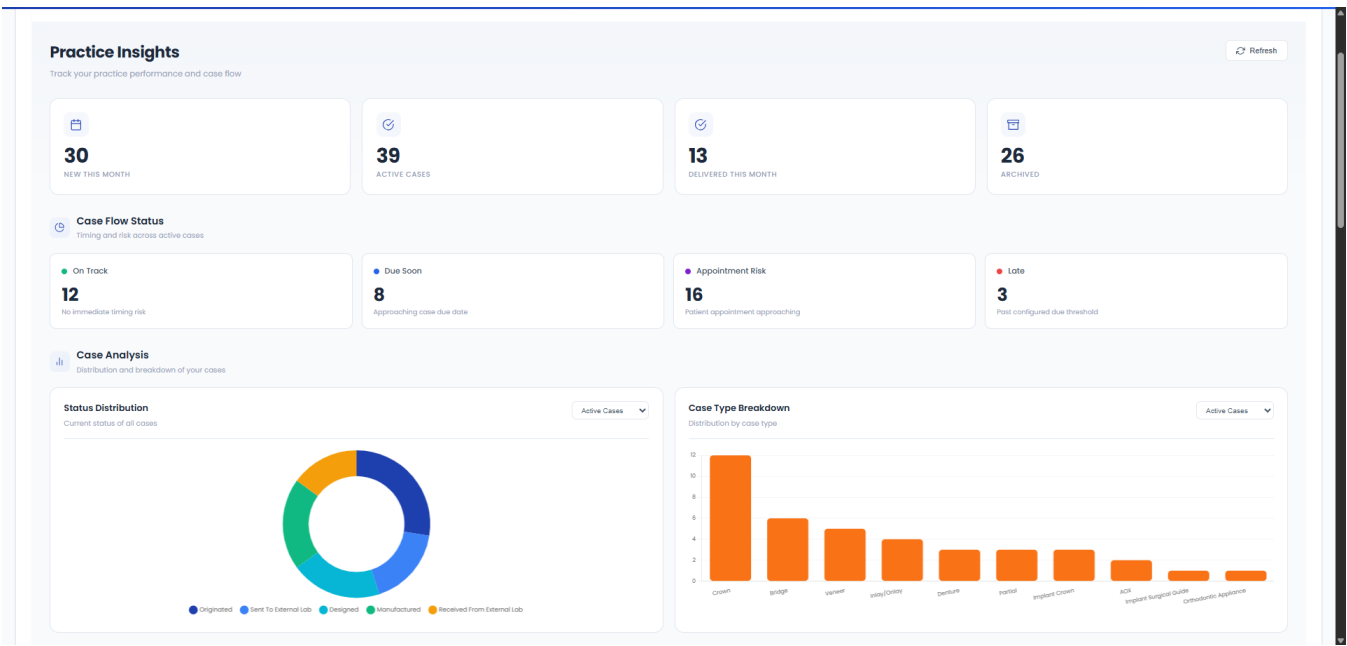

Figure 7: Practice Insights overview

6.2 Cases Created by User

Cases Created by User shows how many cases were originally created by each user in the practice.

DentaTrak automatically records the creator when a new case is created. This provides visibility into where cases are originating and can help practices understand how case entry is distributed among team members.

Created By does not change when a case is reassigned or updated by another user.

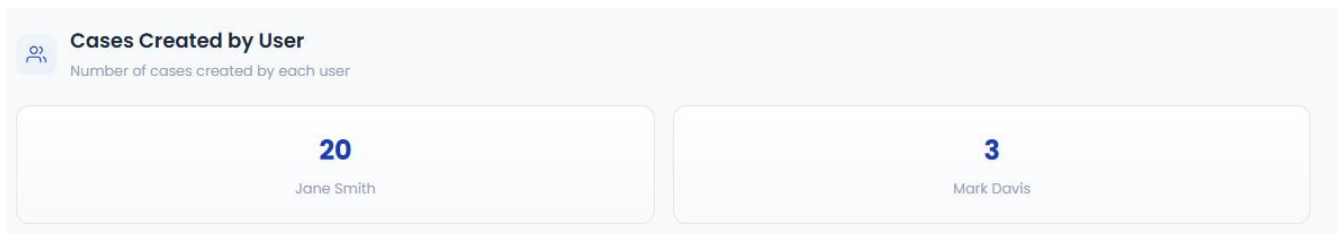

Figure 8: Cases created by user

Section 7: Lab Insights

Lab Insights provides visibility into the workload and performance of users and assignment labels designated as labs. Use Lab Insights to monitor current workload, turnaround time, late cases, revisions, and case assignment trends across the labs your practice works with.

Use the reporting-period selector at the top of the page to change the period included in the analysis. Select **Refresh** to update Lab Insights with the latest available case information.

7.1 Lab Overview

The summary cards at the top of **Lab Insights** provide a snapshot of lab activity for the practice.

- **Active Labs** shows the number of labs with case activity during the selected reporting period.
- **Cases Currently at Labs** shows the number of cases currently assigned to labs and still in progress.
- **Average Lab Turnaround** shows the average turnaround time for completed lab cases when sufficient completion data is available.
- **Currently Late Cases** shows the number of cases currently assigned to labs that are considered late.
- **Revisions** shows the number of revisions associated with lab cases during the selected reporting period.
- **Direct Lab Transfers** shows the number of cases transferred directly between labs during the selected reporting period.

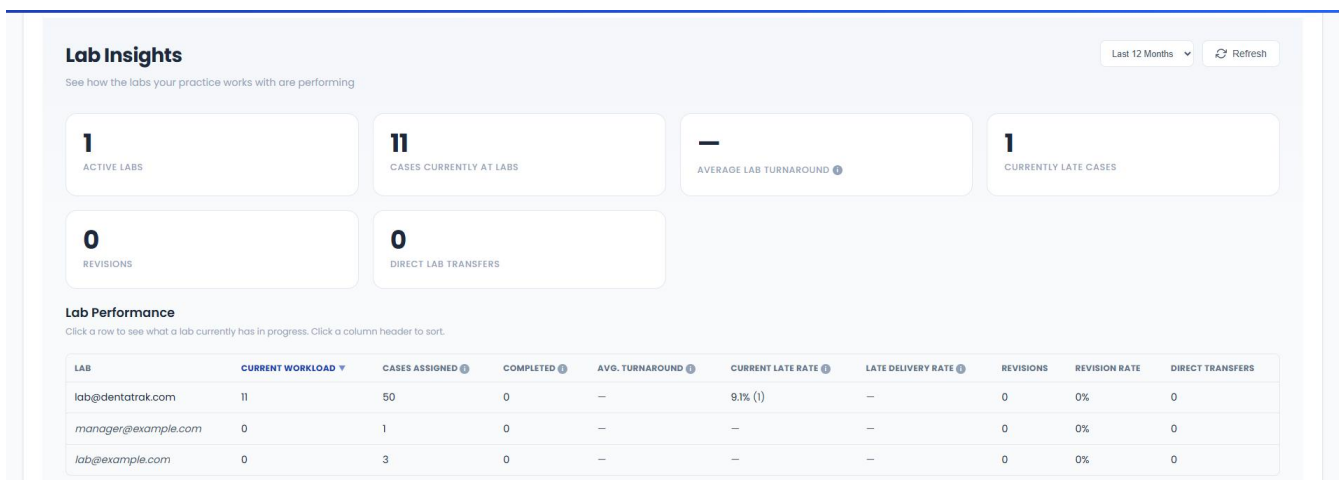

Figure 9: Lab Insights summary metrics and Lab Performance overview

7.2 Lab Performance

The **Lab Performance** table provides detailed workload and performance information for each lab.

- **Current Workload** shows the number of cases currently in progress with the lab.
- **Cases Assigned** shows the number of cases assigned to the lab during the selected reporting period.
- **Completed** shows the number of assigned cases completed during the selected reporting period.
- **Avg. Turnaround** shows the average time required to complete applicable lab cases.
- **Current Late Rate** shows the percentage of the lab's current workload that is late. The number of late cases appears in parentheses.
- **Late Delivery Rate** shows the percentage of completed cases that were delivered late.
- **Revisions** shows the number of revisions associated with the lab's cases.
- **Revision Rate** shows the percentage of applicable lab cases that required a revision.
- **Direct Transfers** shows the number of cases transferred directly to the lab from another lab.

Select a lab row to view the cases currently in progress with that lab. The expanded view displays the **Patient, Type, Status, Due Date,** and **Days Late** for each current case.

Select a column heading to sort the Lab Performance table by that metric.

Lab Performance

Click a row to see what a lab currently has in progress. Click a column header to sort.

7.3 Cases Assigned Over Time

The **Cases Assigned Over Time** chart shows lab assignment volume by month for the selected reporting period.

Each lab is represented separately, allowing you to compare assignment volume and identify changes in how case work is distributed among labs over time.

Use the reporting-period selector at the top of **Lab Insights** to change the period included in the chart.

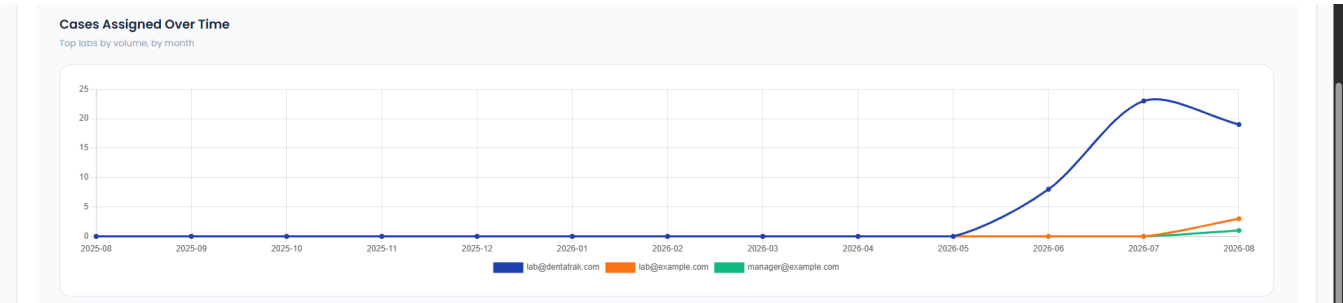

Figure 11: Cases assigned over time

Section 8: Practice Settings & Users

8.1 Display and Behavior

Practice administrators can configure how DentaTrak identifies and manages cases on the Cases board.

Available settings include:

- Configure **Due Soon** highlighting and the number of days before the due date that highlighting begins.
- Configure **Late** case highlighting and past-due behavior.
- Configure **Appointment Risk** highlighting to identify incomplete cases when the patient's appointment date is approaching.
- Allow individual cases to be archived.
- Automatically archive delivered cases after a specified number of days.

8.2 Users, Roles and Assignment Labels

Practice administrators can manage who has access to the practice and what they can do.

- Add and manage practice users.
- Control administrative, analytics, and case permissions.
- Enable **Assigned Only** when a user should see only cases assigned to them.
- Create and manage assignment labels for teams, workflows, or external resources.
- Designate applicable users or assignment labels as labs for use with **Lab Insights**.

8.3 Adding Practice Users

From **Settings > Practice Users & Roles**, add a user using their email address and configure the permissions appropriate for their role. Users can also be configured as **Assigned Only** when they should have access only to cases assigned to them.

Section 9: Multiple Practices

Users who belong to or own multiple practices can access them from the practice selector. Each practice maintains its own cases, users, settings, and practice information.

9.1 Switching and Creating Practices

Select the **practice name** in the upper-left corner of DentaTrak to open the practice selector.

- **Switch practices:** Select another practice from the list. DentaTrak updates the Cases board, insights, settings, and other practice-specific information to reflect the selected practice.
- **View your role:** Your role within a practice, such as **ADMIN**, is displayed next to the practice when applicable.
- **Create a practice:** Select **+ Create New Practice** to begin setting up another practice. The number of practices you can create depends on your DentaTrak subscription plan.

Switching practices does not move or combine case information between practices. Each practice remains separate.

Section 10: Frequently Asked Questions

Why can't I see a case?

Make sure you are viewing the correct practice and check whether any filters are applied. Case visibility can also depend on your permissions. Users configured as **Assigned Only** can see only cases assigned to them.

How do I find an archived case?

Select **View Archived Cases** from the **Cases** tab to view cases that have been archived.

How do I restore an archived case?

Open the archived case and select the **Restore** action. The case is returned to the active Cases board.

How do I change who a case is assigned to?

Change **Assigned To** directly from the case card or open the case and update the assignment, depending on your permissions.

What makes a case Due Soon?

Due Soon identifies cases approaching their due date. The number of days used to determine when a case is considered Due Soon is configured in practice settings.

What makes a case Late?

A case is highlighted as **Late** based on its due date and the past-due behavior configured for the practice.

What does Appointment Risk mean?

Appointment Risk identifies incomplete cases when the patient's scheduled appointment is approaching. Appointment Risk behavior is configured in practice settings.

Who is shown in Created By?

Created By identifies the user who originally created the case. It is recorded automatically when the case is created and does not change when another user later edits the case.

What does the Revisions number mean?

The revision indicator shows the number of revisions recorded for the case. Open the case and select the revision indicator to review its revision history.

How do I track a shipped case?

Open the case and review the **Shipping** section. When a carrier and tracking number have been saved, select **Track package** to open the carrier's tracking information.

How do I switch to another practice?

Select the current practice name in the upper-left corner of DentaTrak and choose another available practice. Cases and practice-specific information update to reflect the selected practice.

Why can't I create another practice?

The number of practices you can create depends on your DentaTrak subscription plan. If you have reached the number included with your plan, additional practices may require a subscription change or additional practice capacity.

Why don't I see Settings?

Settings is available only to users with the appropriate administrative permissions. If you do not have administrative access, the Settings option is not displayed.

Why don't I see Billing?

Billing is available only to users with the appropriate billing or administrative access. Users without the required permissions do not see the Billing option.

Section 11: Getting Help

DentaTrak provides several ways to get help or share feedback.

11.1 Contacting Support

If you need assistance using DentaTrak or encounter unexpected behavior, contact DentaTrak Support at support@dentatrak.com.

When reporting an issue, include a brief description of what happened and, when helpful, a screenshot of what you are seeing. Providing these details can help DentaTrak Support investigate the issue more quickly.

For security and privacy, do not include patient information or other protected health information (PHI) in support emails or screenshots.

11.2 Sending Feedback

Use the **Feedback** option in DentaTrak to share suggestions, report issues, or provide feedback about your experience with the application.

Select **Feedback** from the main menu and follow the prompts to submit your comments directly from DentaTrak.
